

“WE MAY NOT BE AS FAST AS WE ONCE WERE, BUT FIRE IS FASTER THAN EVER.”

According to the U.S. Fire Administration, people over the age of 65 face the greatest risk of dying in a fire – more than 2 ½ times that of the general population. Ages 85 and over were 3.6 times more likely to die in a fire than the general population.

Certain modern construction methods and synthetic home furnishings have **reduced the time a family has to escape a home fire to about three minutes.**
