

It happens fast!

U.S. fire departments respond to an average of one home fire *every 86 seconds*.

On average, seven people per day die in U.S. home fires where fire sprinklers are not present.

Luckily, so does this!

Fire sprinklers can control and may even extinguish a fire in less time than it would take the fire department to arrive on the scene.

In a home with sprinklers, the average *property loss per fire is cut by about 70% compared to fires where sprinklers are not present*.

Residential fire sprinkler systems cut the risk of dying in a fire by about 80%.
